

IILM UNIVERSITY

School of Computer Science and Engineering

INTERNSHIP PRESENTATION

Python Programming at CodeAlpha

INTERNSHIP DETAILS

STUDENT	Kartik Raj Singh
ROLL NO.	25SCS1003003488
PROGRAM / CLASS	B.Tech (CSE) / 2CSE8
SEMESTER	3
ORGANIZATION	CodeAlpha
DURATION	1 Aug - 30 Aug 2026

Virtual Internship

Academic Session 2026-27

CodeAlpha Python Programming

One-month virtual internship, 1 August to 30 August 2026

Project

Purpose and implementation

Hangman Game

Guess a hidden word through a console game with six allowed mistakes.

JPG File Automation

Move JPG files from a source folder to a destination folder.

Basic Chatbot

Respond to common phrases using predefined rules and a conversation loop.

Features

- Selects one of five words at random.
- Reveals correctly guessed letters.
- Allows up to six incorrect guesses.
- Rejects invalid and repeated entries.
- Displays a win or loss message.

Core Python concepts

- `random.choice()`
- while loop and conditionals
- Strings and list membership
- Input validation and state tracking

Sample run: word = python

Guesses: p, y, t, h, o, n
Result: You guessed the word!

Source file: CodeAlpha_Hangman_Game/Hangman.py

File organization workflow

Read source and destination paths.
Check whether the source exists.
Create the destination if needed.
Select filenames ending in .jpg.
Move matches and report the count.

Tools and behavior

os: paths and folder listing
shutil.move(): file movement
Case-insensitive extension matching
Processes the source folder only

Verified sample

photo.jpg and IMAGE.JPG moved.
notes.txt stayed in the source folder.
Reported count: 2 files.

Source file: CodeAlpha_Task_Automation_with_Python_Scripts/Automation.py

Conversation logic

- Converts input to lowercase.
- Checks phrases with if / elif rules.
- Returns predefined responses.
- Uses a fallback for unknown input.
- Ends when input contains "bye".

Verified sample conversation

You: hello

Chatbot: Hi!

You: how are you

Chatbot: I'm fine, thanks!

You: bye

Chatbot: Goodbye!

Technology: Python functions, string matching, console input/output and a while loop.

Source file: CodeAlpha_Basic_Chatbot/Chatbot.py

Technical learning

- Control flow through loops and conditions
- String operations and list handling
- Reusable functions for response logic
- File and folder operations with Python
- Validation of user input

Applied problem solving

- Tracking the state of a console game
- Automating repeated file selection
- Designing simple conversation rules
- Documenting scripts in GitHub
- Checking expected program outputs

The recommendation letter also recognizes analytical skills, adaptability and teamwork.

Sample checks completed

Hangman: winning sequence, invalid input and repeated guesses.

Automation: .jpg and .JPG files moved, with a non-JPG file retained.

Chatbot: greetings, a question, unknown input and conversation exit.

Future improvements

Hangman: difficulty levels and replay.

Automation: handle filename conflicts and folder permission errors.

Chatbot: match whole words to reduce accidental substring matches.

Thank You
